

## **Waste Heat Recovery Potential Locations**

**Date Posted 8/19/2024**

Kinder Morgan Louisiana Pipeline LLC (KMLP) is participating in a voluntary program to facilitate the development of natural gas fired turbine compressor station exhaust heat recovery for power generation, as detailed in a INGAA white paper entitled "Waste Heat Recovery" Opportunities: Pipelines Present Energy Efficient Proposal". The white paper suggests that pipelines post a listing of gas turbine compressor stations on their system that:

1. Have a total gas turbine station capacity of at least 15,000 hp; and,
2. Operated at or more than 5,200 hours (60% load factor) over the last 12 months.

KMLP currently has one gas turbine compressor station that meet the criteria shown above located in Acadia Parish, Louisiana (Station 760).
