

Permian Highway Pipeline Project

Pipeline solution provides takeaway capacity for prolific Permian Basin

The approximately \$2 billion Permian Highway Pipeline (PHP) Project is designed to transport up to 2.1 billion cubic feet per day (Bcf/d) of natural gas through approximately 430 miles of 42-inch pipeline from the Waha area in Texas to the U.S. Gulf Coast and Mexico markets.

The entire capacity of the PHP Project is fully subscribed under long-term, binding agreements. Kinder Morgan Texas Pipeline (KMTP), EagleClaw Midstream and Altus Midstream each hold an ownership interest in the project of approximately 26.6 percent, and an affiliate of an anchor shipper has a 20 percent interest. KMTP will build and operate the pipeline.

The PHP Project will provide an outlet for increased natural gas production from the Permian Basin to growing market areas along the U.S. Gulf Coast, including new LNG facilities that will be in service in the next few years.

Expected Commercial In-Service Date: Early1Q 2021
