

Storage Election (WVRV2088) Enhancement

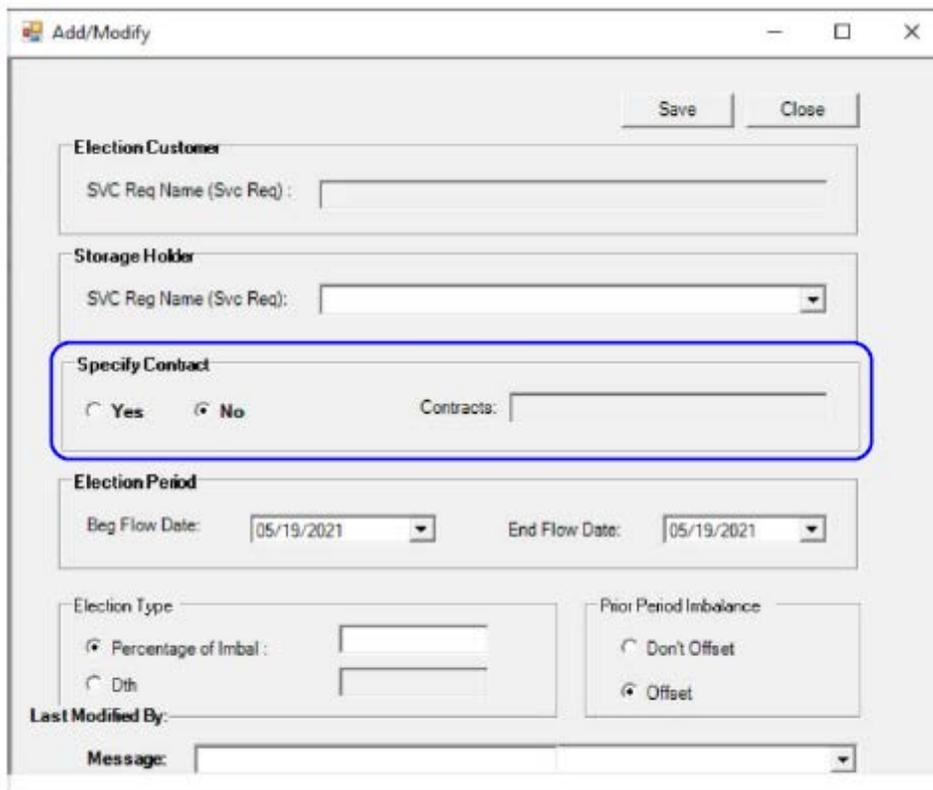

Summary

Southern Natural Gas Company has modified its storage offset election process to allow shippers to select a specific contract of the storage holder (CSS or ISS) used to offset their imbalance. The default method is to offset imbalances using the storage account that provides the least cost impact to the storage holder. There may be varying reasons why a storage holder wishes to not proceed in this manner. The enhancement of “Specify Contract” addresses this concern.
